

D-Tools' Mobile Quote 2.0 iPad® app makes it easy to walk prospective clients through available technology options and seamlessly generate a scope and budget for customer approval at the project site. The data collected is instantaneously transferred into D-Tools SI for further design development and project management.

Leveraging D-Tools' extensive product library and workflow concepts, such as the specification of devices by location and system, Mobile Quote 2.0 allows salespeople to obtain signed approval of a project's scope and budget, and even collect a design retainer, in the very first client meeting, thereby eliminating the competition.

D-Tools Mobile Quote 2.0 enables System Integrators to:

- Create New Quotes — Add Client/Contact Information
- Create/Specify Locations & Systems — Add Photos
- Specify Product Categories & Project Phases from SI
- Specify General Products (allowances) and Quantities
- Specify Package Information from SI Catalog
- Specify Estimated Labor
- Calculate Estimated Total for Scope & Budget/Design Retainer/Quote
- Get Customer Approval — Sign Off for Additional Work

Mobile Quote 2.0
