

D-Tools Hosted Solution

Powered by Amazon Web Services™

The D-Tools hosted solution is a “plug and play” option for users that are looking for mobility and to store their D-Tools SIX Server on the Cloud. Each customer has their very own D-Tools Server instance powered by the latest generation Windows Server 2012.

The D-Tools Hosted Solution includes the D-Tools SIX server management application and comes completely configured with SQL Server 2012. The D-Tools Hosted Solution is powered by Amazon Web Services™ for the ultimate in scalability, security, and performance.

The D-Tools Hosted Solution offers users the option to purchase the software and host the server instance in the cloud which enables them a lower cost of entry and removes the need for costly in-house IT infrastructure.

For security, the pre-configured firewall only allows traffic from the D-Tools SIX application, and the only ports opened to traffic are 9010, 1433 and 1434. For enhanced security, the connection to those ports can be tied to your specific IP address therefore only computers on your network can connect to your cloud server. Our technical support team performs the installation and setup for you.

The D-Tools Hosted Solution Offers D-Tools Users:

- Cloud Hosted Access to D-Tools SIX 2013 Server
- Lower IT Infrastructure Costs — no need for in-house servers
- Connect to D-Tools SIX 2013 Client via the internet anywhere without the need for VPN

The D-Tools Hosted Solution offers our users a flexible choice for deployment and users can migrate to an on-premise solution over time if their needs change. The D-Tools Hosted Solution is perfect for companies just getting started or for those companies who are migrating to a service-based model for their IT infrastructure.

The D-Tools Hosted Solution is available now with monthly hosting starting at \$149 per month*.

**Additional one time setup fee required.*
